WEEK 1

Reflection:

This week's lab activities helped me develop my understanding of JavaScript and my basic programming skills. I have learned to use variables input operators, and conditionals to write some very simple programs. One difficulty I encountered was getting used to the syntax of the programs and correcting small problems, but practising the programs from this week's activities gave me more confidence. From this week's activities, I have also learned that it is best to pay attention to details and check for typos, because a typo can make a program not work as expected.
